

Laboratory technologist. The goals of this lab include: 1) identifying the mechanisms by which obesity contributes to immunosuppression and breast cancer and 2) identifying immunogenetic and functional differences that contribute to mastitis susceptibility or resistance in dairy cattle. Candidates should demonstrate prior experience in at least one of the following areas: molecular biology, flow cytometry, and/or immunohistochemistry, with at least 2 years laboratory experience and a B.S or M.S. This will be a senior position and the hired individual will supervise and conduct day-to-day activities, maintain accurate records and quality control within the lab, ordering, as well as other duties necessary to complete the goals of the research laboratory. Good oral and written communication skills, a high degree of motivation, the ability to work independently, as a team, and on multiple projects simultaneously, as well as enthusiasm for research are preferred.

If interested please contact and send a curriculum vitae to:

Gina Pighetti

Assistant Professor
